Subject: WPD input for Hotsites

Fran,
I am providing this early in order to get some other work completed this afternoon. If anything changes, we'll let you know.

Drinking water samples collected between January 10-16 and on January 22nd, 2014 were reanalyzed for PPH. These samples were from the intake (raw water) as well as finished drinking water. All 30 samples were reported as nondetectable for PPH at a detection limit of 2 ppm. Further testing is planned with a detection limit of 1 ppm. In addition, water testing at the WV American Water Treatment Plant indicated no sign of phenol, a by-product that would appear if the PPH had reacted with water treatment processes.
